

# Introducing the **Road Research Register**

The online information source for Australian and New Zealand road-related research projects:

- Designed to promote awareness of road-related research activities
- Project information includes issue, method, contacts and outputs
- Covers research in progress and an archive of completed projects
- Promotes sharing by opening avenues to possible research collaboration
- Current contributors include Federal, State and Territory Government organisations within Australia and New Zealand.

## Searching the Register

Simple and advanced search options are available as well as the ability to browse (including subject area, organisation, project leader)

Two level access - non-password access to majority of project details  
- password access to full project details available to data contributors.

## Available now

You will find details for over 500 projects, current and completed, for areas including:

- Bridges
- Environment
- Heavy vehicles
- ITS
- Pavement structures
- Registration and Licensing
- Road design and maintenance
- Road safety
- Skills and Education
- Traffic management

## Coming soon

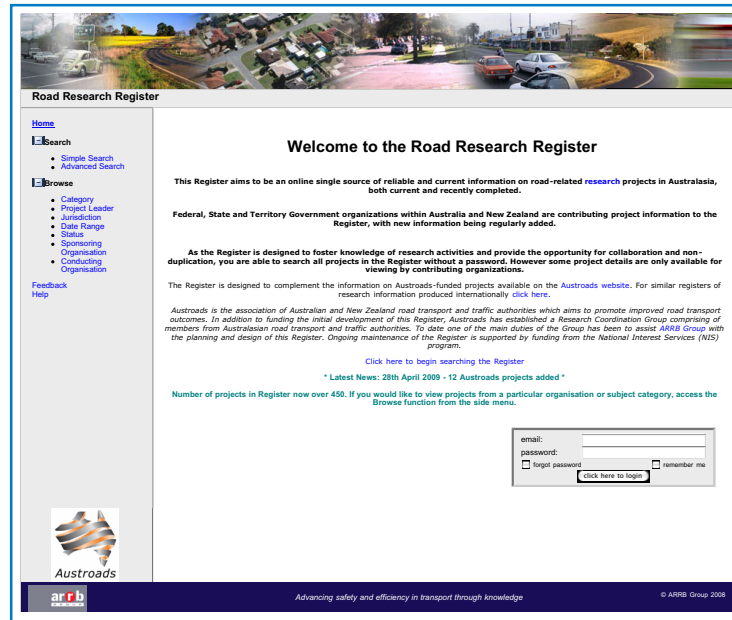

By the end of 2009, the aim is to add information on research projects from other bodies commissioning research and also on road-related post graduate research.

## Contact information

Project data, and feedback, always welcome.
